The D3 zone at EPA-01 was monitored through the open Westbay pumping port during the cross-hole test. The pressure transducer record showed zero response for both tests. Do you want the Excel file with the flat water levels?

Subject RE: Cross-hole Pneumatic Pilot Testing

We understand from our recent meeting that USGS monitored the water level in one or more of the off-site D3 wells during our testing of B-32D3. We would like to obtain those data. Thanks.

Subject: Cross-hole Pneumatic Pilot Testing

As a follow up to the pilot test performed on June 5, we are planning to complete a second test using modified test procedures as recommended by USGS.

The revised test procedures include the use of packers in the two observation wells (B-31D3 and B-33D3) and a pneumatic slug of 10 psi in test well B-32D3.

We are planning to conduct the test next Tuesday, August 12.

Please do not hesitate to contact Paul Hare or I if you have any questions.

Ralph
